

PERMANENT DOCUMENT

ENEC 303  
Annex AJ

**Annex AJ**  
**to Routine Test Requirements for manufacturers**  
**(as per Article 9 of the Agreement)**  
**LED modules for general lighting – Safety specifications**  
**covered by EN 62031**

**Draft**

Update UV radiation and blue light hazard requirements for PVT

Approved by:	To approve by ENEC Group <del>MCCB-meeting</del> <del>28<sup>th</sup> April 2021</del>	No. of pages: 3
Date of issue:	<del>April</del> December 2021 draft	
Supersedes:	PD ENEC 303 Annex AJ – April 2021 <del>December 2013</del>	Page 1 of 3

## **Annex AJ to PD ENEC 303**

### **for LED modules for general lighting – Safety specifications covered by EN 62031**

---

#### **1. ROUTINE TESTS (100%)**

##### 1.1 Operating Check

The LED module power shall be measured at rated voltage/current. The luminous flux of no LED module should be significantly lower than that of the rest of the production.

Very low values of the luminous flux indicate internal losses that can be safety relevant, such as current bridges.

##### 1.2 Inspection (for independent and built-in)

Visual inspection shall take place to ensure that:

- a) all specified labels are securely in place;
- b) manufacturers' instructions are placed with the LED module, where necessary;
- c) visual inspection of LED module for completeness and mechanical check against a checklist for the product.

##### 1.3 Electric strength / Insulation resistance test (for independent and built-in)

Please refer to EN 60598-1 Annex Q (Table Q.1 Minimum values for electrical tests).

##### 1.4 Earth continuity (only for independent class I and built-in class I)

Please refer to EN 60598-1 Annex Q. (Table Q.1 Minimum values for electrical tests).

#### **2. PRODUCT VERIFICATION TESTS (PVT) (at least once a year)**

##### 2.1 Endurance test

This test shall be carried out on the most critical type of each range of products. Please note that this test is only applicable to luminaires with an IP Class of 20 or above.

##### 2.2 Protection of the enclosure

##### 2.3 Mechanical strength of screws and nuts

2.4 Protection against electric shock (clause 8) and creepage distances and clearances (clause 11)

2.5 PHOTOBIOLOGICAL SAFETY OF LAMPS AND LAMP SYSTEMS (EN 62471, ~~IEC/TR62471-2~~ and IEC ~~TR62778~~)

2.5.1 UV Radiation Hazard

The ~~periodic tests~~ below ~~are~~ ~~is~~ only required for LED modules where UV light is converted to visible light by phosphor conversion.

~~2.5.1.1 UV radiation hazard measurement according to Clause 5 of EN 62471~~

2.5.2 Blue Light Hazard

Modules ~~not exceeding classified RG0 and/or~~ RG1 ~~unlimited~~ do not require periodic ~~testing tests~~ as mentioned below.

~~2.5.2.1 Threshold illuminance  $E_{thr}$  assessment according to IEC TR 62778~~

~~2.5.3 PVT tests~~

~~2.5.3.1 Hazard exposure limits (Clause 4.3)~~

~~2.5.3.2 Lamp classification (Clause 6)~~

~~2.5.3.3 Labelling (62471-2 Clause 5.4)~~

~~2.5.3.4 Other information provisions (62471-2 Clause 5.5).~~
